

NRW response

Hello [REDACTED]

Some comments from Natural resources Wales for your consideration.

Page 6 Q1: Do you have any comments on what the purpose of ODIs should be at PR24? This section refers to linking to shareholder's returns, how does this work for a not-for-profit water company?

ODIs should promote solution of problems at source rather than supporting end of pipe fixes. More on sustainable drainage and removal of surface water from combined systems.

Page 12 we support the setting of different rates for out and underperformance. Industry wide achievement of PCLs should be the baseline from which to improve.

Page 21 Q8. We would be interested to know if Ofwat see value in applying enhanced ODI rates to PCL achieving companies to deliver new and innovative approaches such as catchment and nature-based solutions. To incentivise companies (and Ofwat) to take a risk on a new way of working to achieve Ofwat's PR24 long term planning and outcome based solutions aspirations.
