Draft determination of Affinity Water's in-period outcome delivery incentives for 2022-23

We have reviewed the draft determination and noted the decisions relating to the ODIs for properties at risk of low pressure, experience measures and tax.

On leakage reporting compliance, we noted the draft determination's deferral of the outperformance payment, £0.439m for 2022-23 leakage performance, for non-compliance with the PC definition. We had proposed the leakage outperformance payment as we had assessed the effect of our compliance with reporting methodology to be non-material.

We continue our work to bring our reporting into full compliance and note Ofwat's decision that in making future determinations, should leakage or per capita consumption information be revised or restated, it will take account of the adjustments it has made to relevant price controls in relation to the leakage performance commitment.

Yours sincerely,

Liv Walton
Director of Regulation and Strategy
